

# OVALE GÉANTE

WHEN KNOW HOW BECOMES ART

L'Epée launches a giant ovale timepiece according to its rich history of masterpieces.

Its mechanical movement is equipped with a fine pendulum. Wheels, pinions and their reflection can be admired through the transversal glasses. The set of wheels comes alive each halfhour and hour to activate the subtle bell ringing.

The owner's daily time is somehow regulated by the clock's pendulum and its permanent oscillations. L'Epée profiles itself as the Creator of Clocks with undeniable know-how in the development of high-end mechanical movements.

## KEY SPECIFICATIONS
