

TRIPOD

USER INSTRUCTIONS

MB&F + *L'EPEE 1839*

CONGRATULATIONS

You have just adopted TriPod, an advanced timepiece born from the partnership between

La Manufacture **L'Épée 1839** and **MB&F**.

TriPod has been developed with passion and care by the Master Watchmakers of L'Épée 1839 in Delémont, Switzerland.

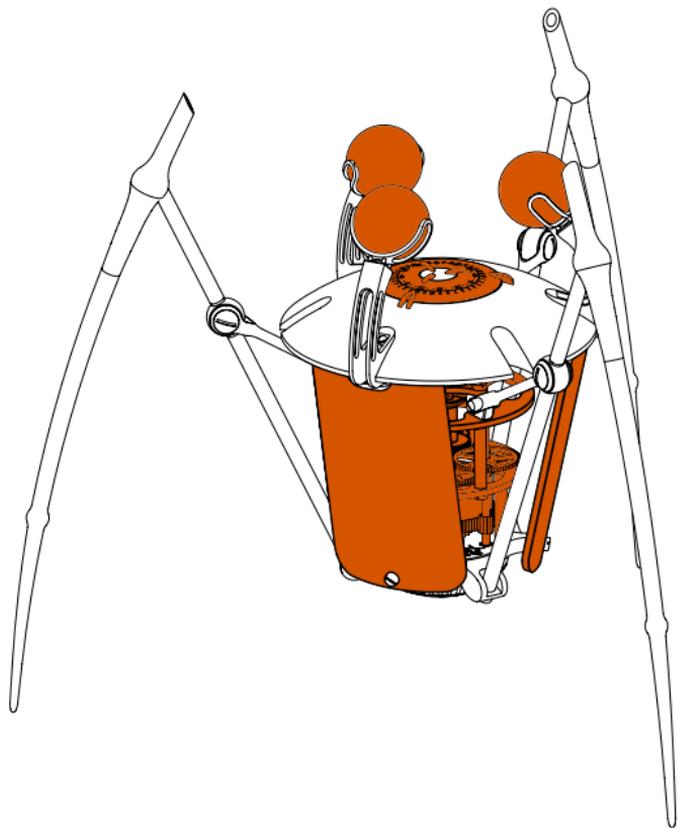

CONTENTS

Important information	7
Care and maintenance	9
Winding the movement	10
Reading the time	12
Setting the time	14

IMPORTANT INFORMATION

PLEASE BE VERY CAREFUL TO NEVER TOUCH THE MOVEMENT OF TRIPOD: RISK OF DAMAGE.

NEVER TOUCH THE COMPONENTS COLORED IN ORANGE IN THE FOLLOWING PICTURE.

CARE AND MAINTENANCE

Use only a soft and dry cloth to clean the clock. Dust and particles contained in the cloth could scratch parts. Do not use any kind of cleaning products to clean the clock. It is recommended to keep the clock distant from any source of heat or vibrations. To preserve the longevity and functionality of TriPod, do not permanently expose the clock to direct sunlight or in a humid/dusty place.

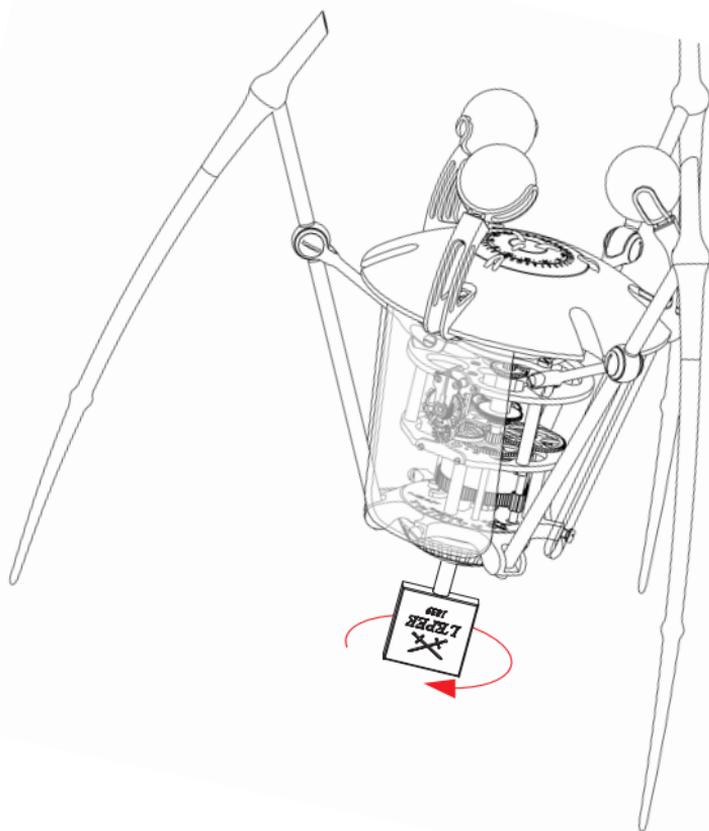

Our clocks are developed to ensure optimal accuracy and reliability. It is well accepted for a fine mechanical clock to have a few seconds' variation per day and our clocks are set so as not to delay. However, if you should notice a bigger variation, please contact an authorized dealer who will advise you, or a L'Épée 1839 technical support center which will proceed with the necessary adjustment.

As for all horological pieces of art, it is recommended to periodically service your clock. A mechanical masterpiece requires fine oils for the lubrication of the movement. These oils deteriorate over the years. We therefore advise having the movement overhauled every 5 years. Be aware that the optimal period between servicing times can vary depending on the surrounding environmental conditions.

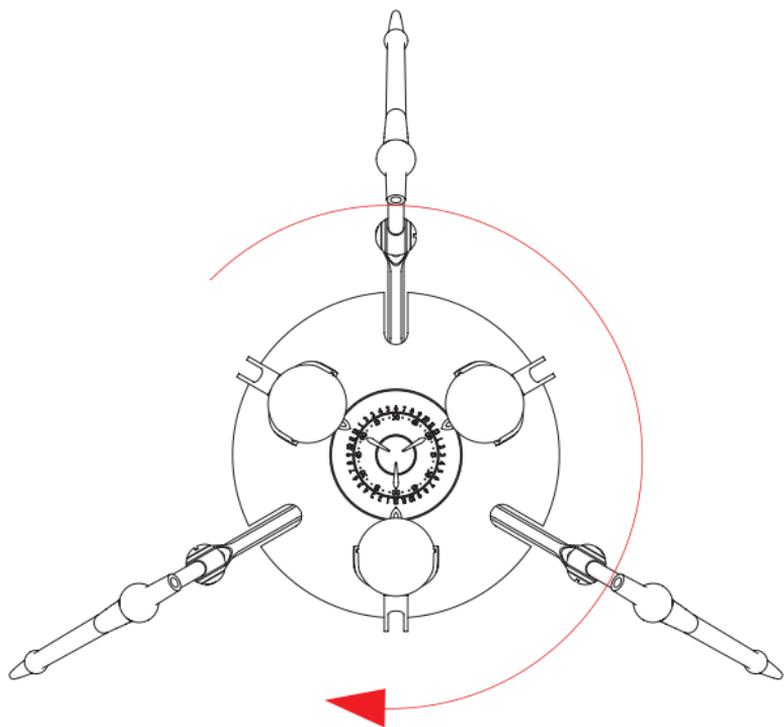

It is recommended to hold TriPod only by the legs, the dome or the base. Avoid touching the glass, movement and the glass spheres.

WINDING THE MOVEMENT

Tilt the clock gently by holding it by one leg. Insert the key at the bottom of the piece on the axis of the barrel (hole in the middle with the larger diameter hole).

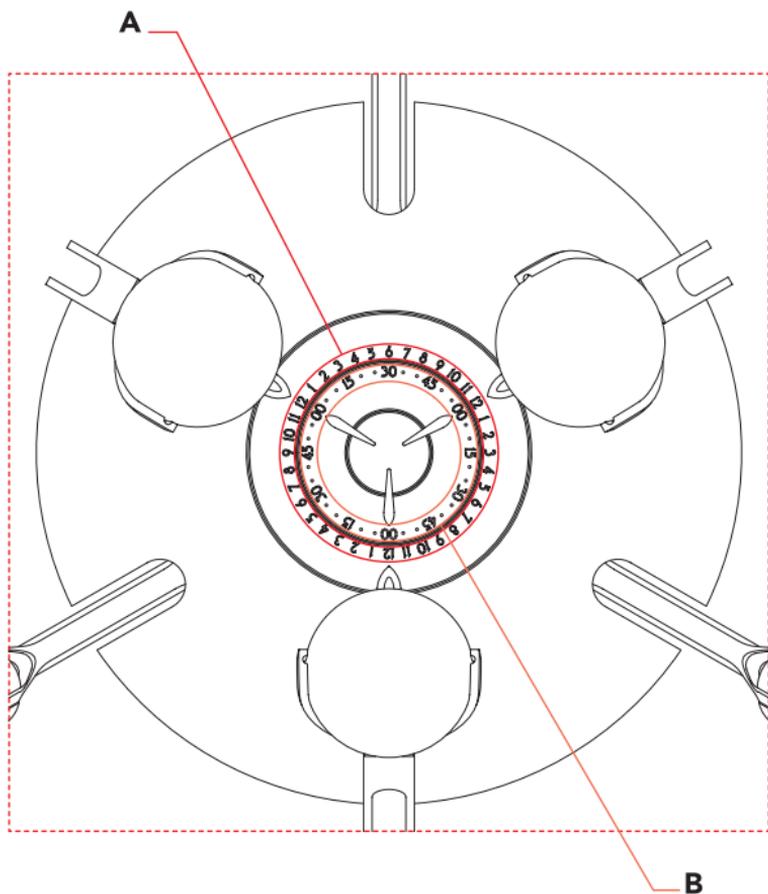

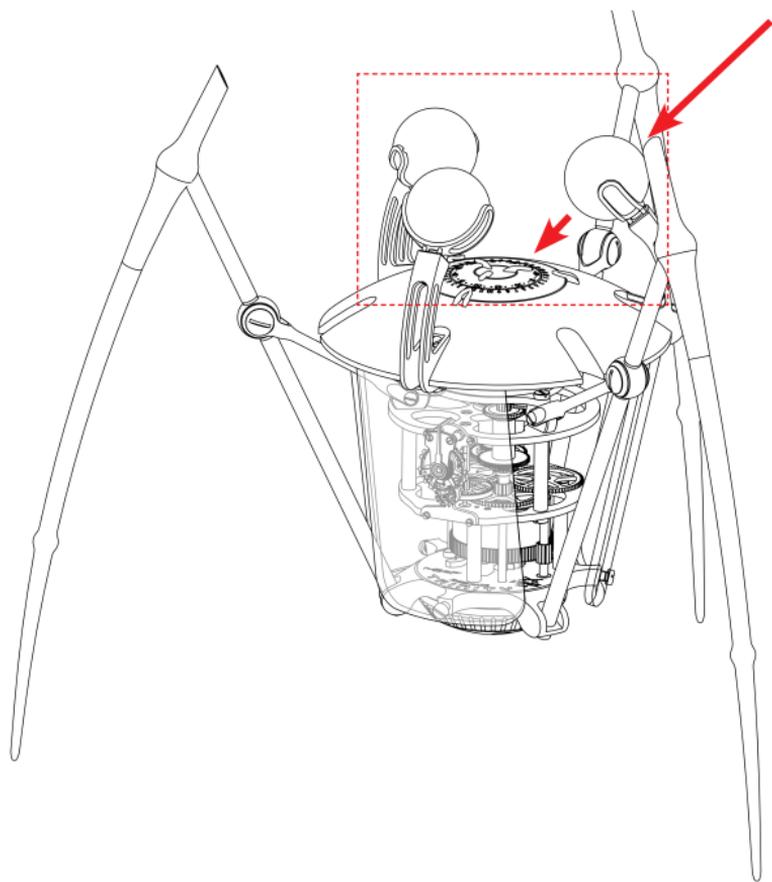

Wind clockwise (from the top view) until you feel that the necessary force increases significantly; do not wind further as this is the sign that the movement is fully wound. You need to wind your TriPod every 8 days.

READING THE TIME

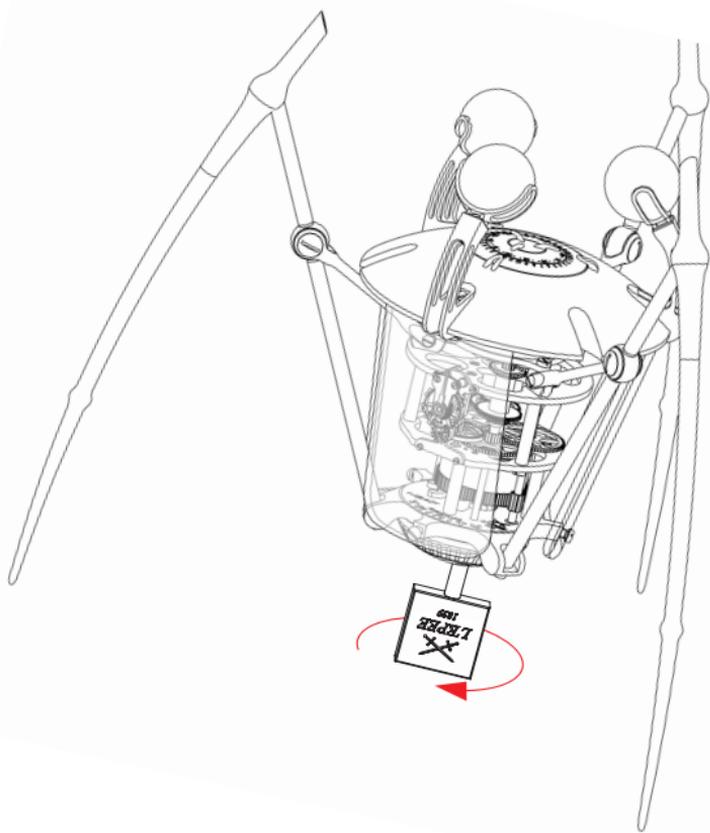

The hours (**A**) and minutes (**B**) are indicated by the two concentric dials and visible through one of the three glass spheres.

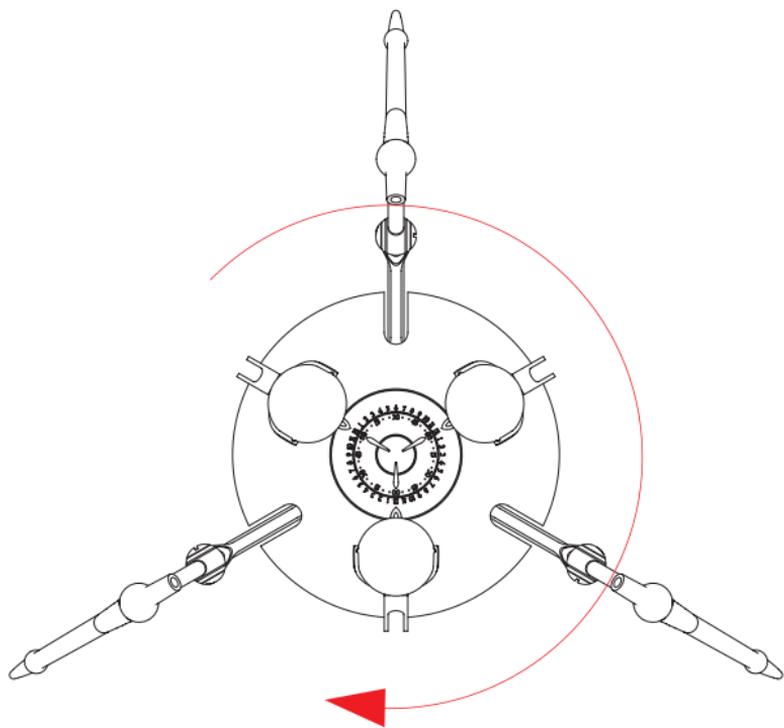

SETTING THE TIME

Tilt the clock gently by holding it by one leg. Insert the key at the bottom of the piece (off-centre hole with the smallest diameter hole) and turn the key clockwise (from the top view) to set the time.
